

# SANDERSON FIELD R.C. NEWS

CHARTER NO. 3079

Meeting at Sanderson Field

Thursday September 12th

## CLUB MEETING

**Remember, Attend a meeting and get a chance to win the E-flite P-47 razorback 1.2 meter!**

Oysterfest is coming up, *the runway will not be available to us from September 26th-October 10th.*

Apparently we were one of the top grossers at last years Oysterfest and they are going to move our location down next to the beer garden.

We are going to be preparing the ingredients on Friday night in our booth once we have it set up.

**We are going to need lots of help manning the booth on Saturday October 5th and Sunday October 6th so people don't have to work all day! Please let me know if you can help and the time you are available. Set up and Food prep is Friday**

Meetings at the field are always weather permitting. Otherwise it will be at the Calvary Fellowship church at 50 East Island lake drive.

**afternoon October 4th.**

**This years Dawn Patrol is in the books, the weather was great and Hunters looked really good. Too bad only 5 people showed up.**

Alt Board Member ..... John Sommer .....(360)968-9323  
Alt Board Member ..... Tom Strom .....(360)791-7729  
Alt Board Member ..... Paul Fleming.....(253)225-0780  
Alt Board Member ..... Jack Mitchell .....(253)377-7019

## Spektrum NX – Transmitter

### Replacing the airplane symbols

through your own self-created photos / graphics

In the main screen of the Spektrum NX transmitter series, you can select and place a model symbol that is already stored in the transmitter. However, it is also possible to insert a self-created, colored image or graphic, as shown below.

### Generate a self-created image

To do this, you will need a photo of your model or a photo of the corresponding original. The photo must have an aspect ratio of 1.375:1 (side:height). To ensure that the photo blends harmoniously into the background of your channel's main screen, the background of the photo should be plain and solid white. If the original photo does not match the aspect ratio mentioned above, you must crop the photo using an image editing program. Then reduce this photo to a pixel size of 110 x 80 pixels. In the image editing program, increase the color depth to 24 bits. This corresponds to 16 million colors (true colors). Now save this image as a BMP to your hard drive. If you have the option, save the photo with the RGB option. You can now copy this image to your channel.

### Installing the image on your NX transmitter

Turn on the transmitter and connect it to your PC using a USB cable. To do this, go to SYSTEM SETTINGS and then to USB SETTINGS. Activate ACCESS INTERNAL STORAGE. Now

A new drive will appear on your PC. This is the internal memory of your transmitter. In the main directory of your transmitter memory, you must now create a new folder called *Images*. Copy the model photo you created into this folder.

Now exit the USB SETTINGS in your transmitter and go to the AIRCRAFT TYPE menu and then to the second screen (AIRCRAFT OPTIONS). At the end go to the menu item *Select Image* and on the next screen select the entry *Image from File*. You will now see the image that you previously copied into the transmitter memory. Select this image, use the BACK button to exit all menus and go back to the main screen. Your created model image should now appear here.
